§2.16. Problems on Lie algebras 39

Chapter 3. General results of representation theory 43

§3.1. Subrepresentations in semisimple representations 43

§3.2. The density theorem 45

§3.3. Representations of direct sums of matrix algebras 47

§3.4. Filtrations 49

§3.5. Finite dimensional algebras 49

§3.6. Characters of representations 52

§3.7. The Jordan-Hölder theorem 53

§3.8. The Krull-Schmidt theorem 54

§3.9. Problems 56

§3.10. Representations of tensor products 59

Chapter 4. Representations of finite groups: Basic results 61

§4.1. Maschke's theorem 61

§4.2. Characters 63

§4.3. Examples 64

§4.4. Duals and tensor products of representations 67

§4.5. Orthogonality of characters 67

§4.6. Unitary representations. Another proof of Maschke's theorem for complex representations 71

§4.7. Orthogonality of matrix elements 72

§4.8. Character tables, examples 73

§4.9. Computing tensor product multiplicities using character tables 77

§4.10. Frobenius determinant 78

§4.11. Historical interlude: Georg Frobenius's "Principle of Horse Trade" 79

§4.12. Problems 83

§4.13. Historical interlude: William Rowan Hamilton's quaternion of geometry, algebra, metaphysics, and poetry 88
