§5.27. Representations of semidirect products 145

Chapter 6. Quiver representations 149

§6.1. Problems 149

§6.2. Indecomposable representations of the quivers A_1, A_2, A_3 154

§6.3. Indecomposable representations of the quiver D_4 158

§6.4. Roots 164

§6.5. Gabriel's theorem 167

§6.6. Reflection functors 168

§6.7. Coxeter elements 173

§6.8. Proof of Gabriel's theorem 174

§6.9. Problems 177

Chapter 7. Introduction to categories 181

§7.1. The definition of a category 181

§7.2. Functors 183

§7.3. Morphisms of functors 185

§7.4. Equivalence of categories 186

§7.5. Representable functors 187

§7.6. Adjoint functors 188

§7.7. Abelian categories 190

§7.8. Complexes and cohomology 191

§7.9. Exact functors 194

§7.10. Historical interlude: Eilenberg, Mac Lane, and "general abstract nonsense" 196

Chapter 8. Homological algebra 205

§8.1. Projective and injective modules 205

§8.2. Tor and Ext functors 207

Chapter 9. Structure of finite dimensional algebras 213

§9.1. Lifting of idempotents 213

§9.2. Projective covers 214
